# Solar Panel Ballast Blocks

Solar panel ballast blocks provide support for ground mounted solar panel systems, which provide a non-invasive, stable base to secure solar farm panels to.

The above ground solar panel ballast blocks do not breach the land, which means farm fields can quickly be returned to agricultural use when and if required.

Available in standard sizes from stock within days of purchase, the concrete blocks have cast-in lifting points for ease of handling and can be relocated if required.

Made in the UK, under factory-controlled systems, the 100% recyclable, reusable and resalable blocks are a real winner in terms of quality and sustainability.
