

ELITE

PRECAST CONCRETE

Creating safer infrastructure with precast **Rail Products**

Elite Precast Concrete has a strong reputation for delivering Network Rail approved products to the rail industry, with goods supplied to HS2, rural rail links and inner-city rail projects.

Our products are manufactured in the UK and delivered within days of requisition. They have proven strength, low maintenance, durability and a long-term service life. Products can be installed in any weather, reducing site delays and meeting site programmes.

Applications

- Stabilisation
- Remediation
- Protection
- Security

Benefits

- Cost effective
- Fast to build
- Simple to install
- Innovative design
- Available within days of ordering
- Robust and durable
- Minimal maintenance
- Engineered strength

Rail Products

Interlocking Blocks

We manufacture interlocking blocks for fire breaks, retaining, blast and push walls.

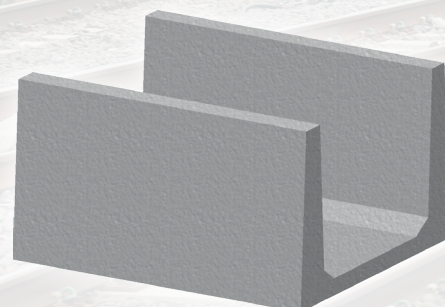

Blocks can also be used as barriers between open rail lines during rail replacement to avoid disruption to adjacent working live lines. Our blocks have a minimum of 100 years design life.

Troughs, Channels and Ducts

Accommodating a variety of cabling and other services, our concrete service protection products provide protective barriers against accidental damage, and act as a clear indication of utility installation.

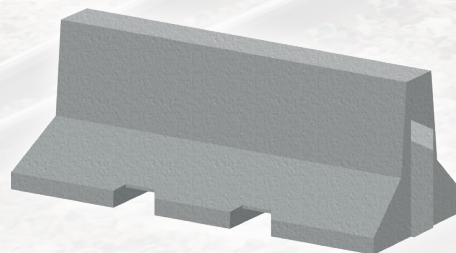

They allow easy access for maintenance and repairs whilst also ensuring added security against intruders.

Safety and Security Barriers

We offer a choice of TVCBs (Temporary Vertical Concrete Barriers), Jersey Barriers, Jersey-Lite™ Barriers, TTPBs (Tank Trap Pyramid Barriers), Bollards, Security Blocks and Security Planters.

Our range of concrete security barriers are a secure solution for keeping passengers and infrastructure safe.

Concrete Cable Protection Cover Tiles

Also known as Cable Route Markers, they are frequently used by utility companies to provide a clear indication to site staff who may be working close to underground electrical cables.

Utility and Pipe Protection/Multipurpose Slab

These are ideal for protecting utilities, such as water pipes, high pressure gas mains and power cables from accidental damage and above-ground traffic.

They have been supplied to Hinckley Point C, HS2 and a number of airport projects protecting vital underground communication equipment during construction works.
